

What's new

Learn about what's new and fixed in each release of Watson Assistant Solutions

6 September 2018

- **Analytics tool improvements:** The user interface has a new look and feel. Charts are rendered faster, the layout of charts has improved, and the pages are more interactive. On the Dashboard page, the delta value from the previous day is displayed with each metric.
- **Conversation API updates:** Tenant ID is sent in the evaluate and converse requests to skills.
- **Self-management of new users:**

12 July 2018

- **90-day trial:** You can sign up for a 90-day trial fo Watson Assistant for industry. Sign up for a trial from the [console home page](#).

14 June 2018

- **Analytics tool improvements:** A new skills page was added to Bot Analytics to provide detailed metrics on which skills are handling the most conversations or the most utterances, and which skills are returning the highest average confidence scores. A new conversation path flow page was added to Bot Analytics. Use the page to walk through the path of a conversation from its starting point through its various branches. View key metrics at each node.
- **Tracking of relation IDs:** In Knowledge and reasoning (alpha), a new REST API endpoint, GET /knowledge/relation, returns information about all relations that are created in the knowledge store, and includes the relation ID. The GET /knowledge/object/{object_id}/{direction} endpoint returns information about objects that are associated with a specified object ID. The endpoint was updated to return information about the relations that are associated with the specified object ID.

17 May 2018

- **Integration with IFTTT (alpha):**
- **Analytics tools (alpha):**
- **Support for multiple tenants:** Support for multiple tenants from the console. You can switch between tenants and edit your tenant details.
- **Audio support updates:**
